Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

1. Claims 51-61 are rejected under 35 U.S.C. 102(a) as being anticipated by Driscoll, Jr. et al. (US Patent No. 5,882,302). Driscoll discloses methods and apparatus for remote hemostasis using high-intensity focused ultrasound (HIFU). Driscoll discloses a method and device for identifying a site of internal bleeding, and focusing therapeutic ultrasound energy through an intervening tissue onto the bleeding site (column 4, lines 1-21). Also see column 4, lines 36-53. The system includes a probe, a controller (column 7, lines 24-28), a processor, memory and a display (column 9, lines 29-33). A transducer disposed within the probe housing images a tissue using a linear and/or sector scanning movement. The operator selects a therapy volume and inputs treatment parameters and the controller then automatically linearly and angularly positions the transducer (column 7, lines 46-55 and column 8, lines 26-39). Once the operator has roughly positioned the probe against the patient's skin, the servo mechanism of transducer positioning mechanism may be used to precisely aim the radiating surfaces (column 9, lines 1-12). The transducer member contains several separate transducers creating an array. Also, the transducer member rotates between imaging and therapy, providing feedback from position indicator to register the treatment

target to the therapy zone adjacent to the internal bleeding site. As individual targets are coagulated, coagulation memory maps that information on display, allowing efficient therapy zone management (column 9, lines 53-65).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James Kish whose telephone number is 571-272-5554. The examiner can normally be reached on 8:30 - 5:00 ~ Mon. - Fri..
